Phase 1 | Brainstorming & Ideation

Brainstorming & Idea Prioritization

AI-Powered Travel Planner | Smart Situational Itinerary Engine

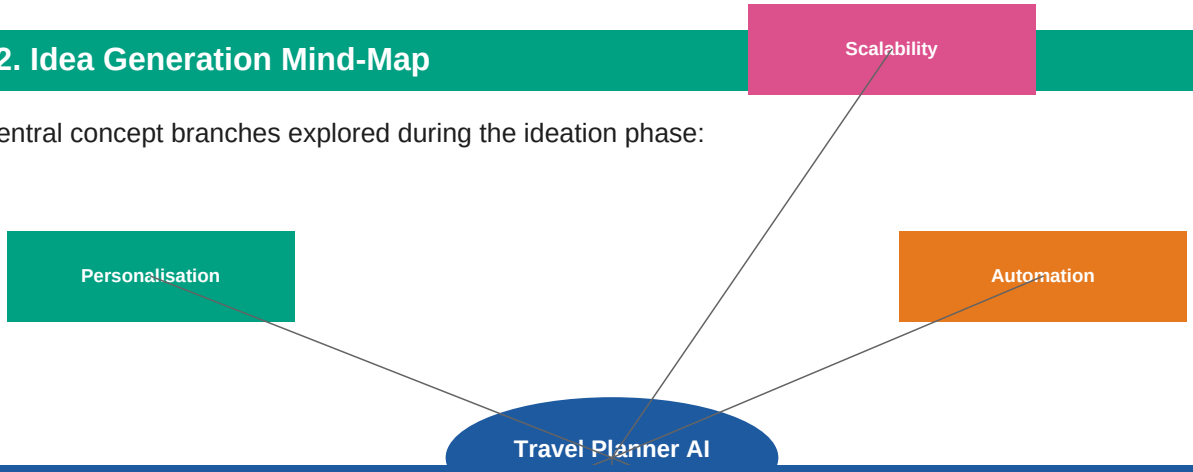
Live URL:	https://travel-planner-iota-plum.vercel.
GitHub:	github.com/itskian2007/travel-planner
Tech:	React + FastAPI + PostgreSQL + Vercel
Team:	itskian2007

1. Introduction

The project began with a structured brainstorming session. The team identified the core pain point: travellers spend hours manually researching destinations and building itineraries. The goal was to design an AI-powered system that automates personalised itinerary creation based on traveller mood, budget, dietary preferences, and accessibility needs.

2. Idea Generation Mind-Map

Central concept branches explored during the ideation phase:



3. All Ideas Generated

#	Idea / Feature	Category	Feasibility	Impact
1	Mood-based itinerary filtering	Personalisation	High	Very High
2	Procedural Day 4-10 engine	Automation	High	Very High
3	Wikipedia API for landmark images	Data Sourcing	High	High
4	Budget tier selection (Budget/Mid/Luxury)	Personalisation	High	High
5	Dietary preference filter (Veg/Vegan/Halal)	Personalisation	High	High
6	Traveller persona (Solo/Family/Couple/Group)	Personalisation	High	High
7	20+ global destination support	Destinations	High	Very High
8	User auth (Register/Login/Forgot Password)	Security	High	High
9	Accessibility preferences	Inclusivity	Medium	High
10	Curated Day 1-3 expert itineraries	Content	High	Very High
11	304 unique verified landmark images	Content Quality	High	High
12	Vercel deployment for 24/7 availability	Infrastructure	High	Very High
13	FastAPI backend for speed & scalability	Tech Stack	High	High
14	PostgreSQL for reliable data persistence	Tech Stack	High	High
15	Mobile-responsive React UI	UX	High	Very High

4. Idea Prioritization - MoSCoW Matrix

Ideas were prioritized using the MoSCoW framework:

MUST HAVE

- Mood-based itinerary filtering
- Procedural Day 4-10 engine
- User authentication (Register/Login)
- 20 global destinations
- React frontend + FastAPI backend
- Wikipedia API image sourcing

SHOULD HAVE

- Budget & dietary filters
- Traveller persona selection
- Day 1-3 curated content
- Mobile-responsive design
- PostgreSQL database

COULD HAVE

- Accessibility preferences
- Forgot password flow
- Animated UI transitions
- 304 verified unique images

WON'T HAVE NOW

- Real-time flight booking
- Live hotel pricing API
- Offline mode
- AR destination preview

5. Final Selected Idea

SELECTED: AI-Powered Smart Situational Itinerary Engine

Rationale: Maximum impact with high feasibility. The combination of mood/persona/budget personalisation

+ procedural day generation + 20 destinations + verified imagery creates a unique, complete travel planning experience that no single existing tool offers end-to-end.
