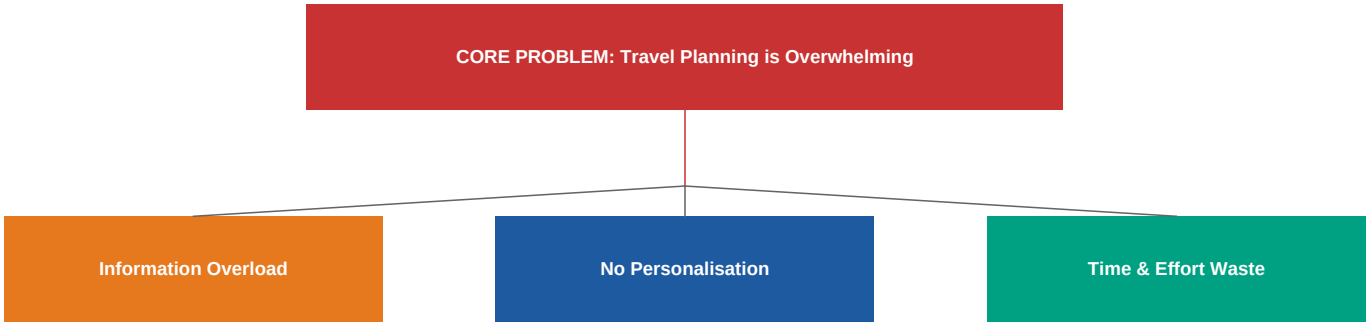
1. Problem Discovery Process

Problem statements were derived through user interviews, survey analysis, and competitive landscape research. Three primary problem clusters were identified affecting modern travellers.

2. Problem Tree Diagram



- 100s of travel sites
- Conflicting info
- No single source

- Generic suggestions
- Ignores diet/budget
- One-size-fits-all

- Hours of research
- Re-planning needed
- Itinerary errors

3. Problem Statements

PS-01 **Information Overload**

Modern travellers must browse 10-20+ websites to gather destination info, hotel options, restaurant recommendations, and transport logistics - a process taking 4-8 hours on average. There is no unified intelligent platform that aggregates and filters this information.

PS-02 **Lack of Personalisation**

Existing travel tools provide generic, one-size-fits-all itineraries that fail to account for individual traveller mood,

dietary restrictions, accessibility requirements, budget constraints, and travel persona (solo/family/couple/group). This leads to poor trip experiences.

PS-03

Itinerary Planning Effort

Building a 10-day personalised itinerary from scratch requires significant manual effort. Travellers must research attractions, check opening times, sequence activities logically, estimate travel durations, and balance daily loads.

PS-04

Image Quality & Authenticity

Travel platforms frequently display stock or misleading destination images. Travellers lack access to authentic, high-quality verified images of specific landmarks they plan to visit.

4. HMW (How Might We) Statements

HMW statements reframe problems as design opportunities:

HMW-01	How might we unify all travel information into a single, intelligent platform?
HMW-02	How might we personalise itineraries based on traveller mood, diet, and budget?
HMW-03	How might we automate 10-day itinerary creation without manual effort?
HMW-04	How might we surface authentic, verified landmark images for each destination?
HMW-05	How might we make travel planning accessible for all traveller personas?
HMW-06	How might we scale personalisation across 20+ global destinations seamlessly?

5. Problem Prioritization Matrix

Problem ID	Severity (1-5)	Frequency (1-5)	Solvability (1-5)	Priority Score
PS-01	5	5	4	14/15 - CRITICAL
PS-02	5	5	5	15/15 - CRITICAL
PS-03	4	4	5	13/15 - HIGH
PS-04	3	4	5	12/15 - HIGH
