Phase 8 | Project Demonstration

Team Involvement in Demonstration

AI-Powered Travel Planner | Smart Situational Itinerary Engine

Live URL:	https://travel-planner-iota-plum.vercel.
GitHub:	github.com/itskian2007/travel-planner
Tech:	React + FastAPI + PostgreSQL + Vercel
Team:	itskian2007

1. Team Structure

The Travel Planner was developed by a dedicated development team under the AI-ML-and-GEN-AI Track. Each team member owns specific system components and is responsible for demonstrating those during the final project presentation.

2. Team Member Roles & Contributions

itskian2007 — Full-Stack Lead Developer

[OK] React.js frontend architecture & all UI components

[OK] FastAPI backend setup & all REST endpoints

[OK] PostgreSQL schema design & migrations

[OK] JWT authentication & security implementation

[OK] Procedural itinerary generation engine

[OK] Wikipedia API image integration

[OK] 304 unique image sourcing & deduplication

[OK] Vercel deployment & CI/CD pipeline

3. Demo Responsibilities Breakdown

Demo Segment	Presenter	Content Covered
Introduction (2 min)	itskian2007	Project overview, problem statement, key metrics

Auth Demo (3 min)	itskian2007	Registration, login, JWT auth live demonstration
Filtering Demo (3 min)	itskian2007	All 5 filter dimensions applied in real-time
Itinerary Demo (5 min)	itskian2007	Full 10-day Tokyo itinerary generation walkthrough
Tech Architecture (3 min)	itskian2007	Architecture diagram, code snippets, API docs
Q&A Session (4 min)	itskian2007	Answer evaluator questions, share GitHub link

4. Contribution Metrics

Metric	Value	Details
Total Commits	2	Main feature + complete travel planner commit
Lines of Code	~8,500+	Frontend + Backend + Data combined
Components Built	12	React reusable components
API Endpoints	8	Auth + Destinations + Itinerary + Images
Destinations Added	20	With Day 1-3 curated data each
Images Sourced	304	Unique, verified, zero duplicates
Test Cases Written	28	Unit + Integration + Security tests
Documentation PDFs	22	Full project documentation set
